

To Whom It May Concern, Sirs, It has come to my attention of a lobby NAB against XM radio services providing traffic and weather information on their services. I am opposed to any type of regulation that would hinder a critical service provided by these radio broadcasters as they are a vital part of my professional career and business. I would hope that no hinderance in the form of regulations prohibiting these types of Broadcast Companies from providing such service be instituted. It would be an unfair regulation giving the NAB an unfair advantage by mere regulation. This is un-American.

In the end, I hope that the NAB will realize they have to be more competetive and provide such services, but not to have such services by XM Radio deemed unlawful by legislative bodies.

I hope to be able to use my XM Radio Traffic and Weather updates in my business to keep up with traffic and weather factors that affect my Business and welfare.

Thank You,
Domingo T Gonzales
